

Enrichment diets

The RICH series of rotifer and artemia enrichments offers a proven, scientific formulation of desirable fatty acids to help ensure a nutritionally complete feeding regime. The RICH series is high in HUFA's and contains phospholipids, amino acids, vitamins, carotenoids, proteolytic enzymes, and growth promoters.

DHA RICH ADVANCED and (n-3) TOP RICH also contain all-natural bacteriostatics. The RICH series is formulated to provide higher stress tolerances in larval fish or shrimp, lower mortality rates, and increased growth rates. The RICH series formulas are highly concentrated (no yeast and just one percent water), competitively priced, and economical to use. The RICH series of enrichment diets is used worldwide by those seeking the highest quality and most economical enrichment formulas.

Product	Use	Feeding regime
DHA RICH ADVANCED	Rotifer culture	30-40 ppm daily + 0.15 g DY/10 ⁶ R daily
	Rotifer enrichment	80 ppm for 12-24h, 25°C, 1.000 R/ml
	Artemia enrichment	300 ppm for 16-24h, 28°C, 300-500 A/ml
(n-3) TOP RICH	Rotifer enrichment	100 ppm for 6-24h, 25°C, 1000 R/ml
	Artemia enrichment	300 ppm for 16-24h, 28°C, 300-500 A/ml

The Rich enrichment diets are used worldwide by those seeking the highest quality.
